# CalCount

The CalCount app works by taking user input "exercise type" and "amount" and updates the chart with the input. The data is accurate up to two decimals. The app also handles input errors so the user does not crash the app.
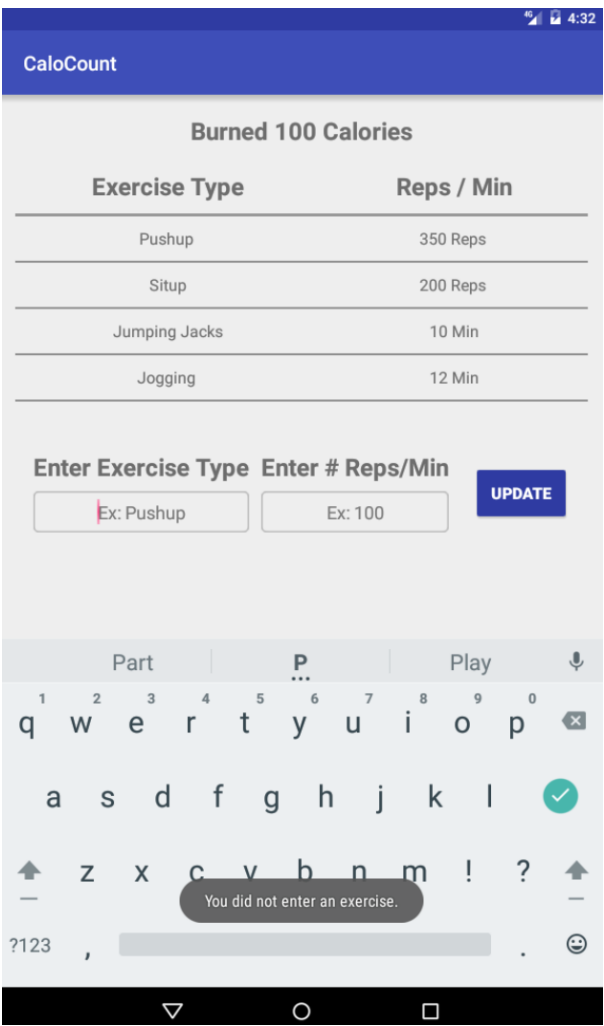

DEMO: https://youtu.be/b2X9NNu4_3c

The user can enter an "Exercise" input and "Number" input and tap on Update to update the chart.

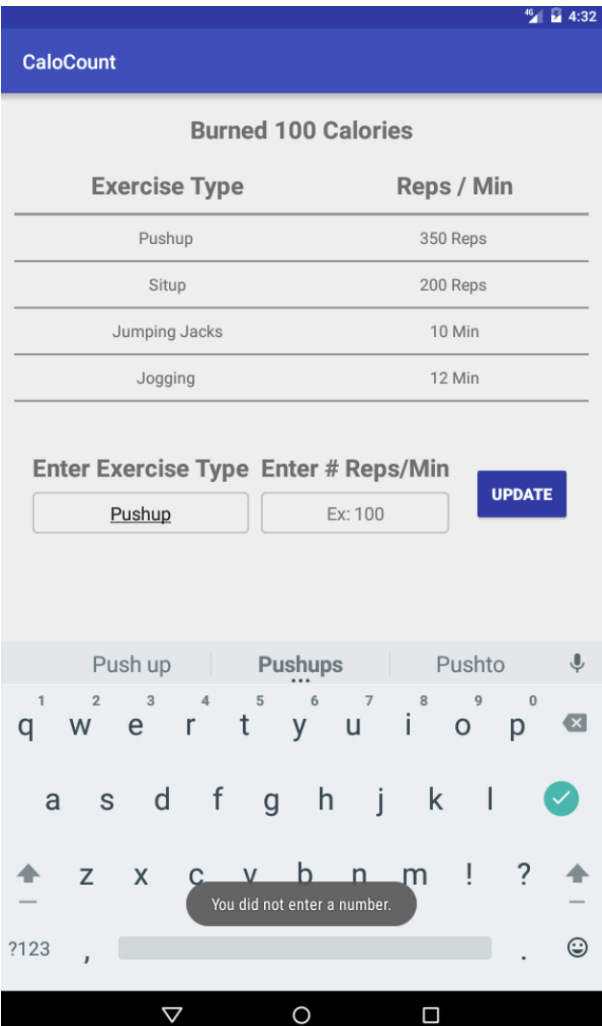

Information for doing 100 Pushups. The chart is updated to show equivalence.
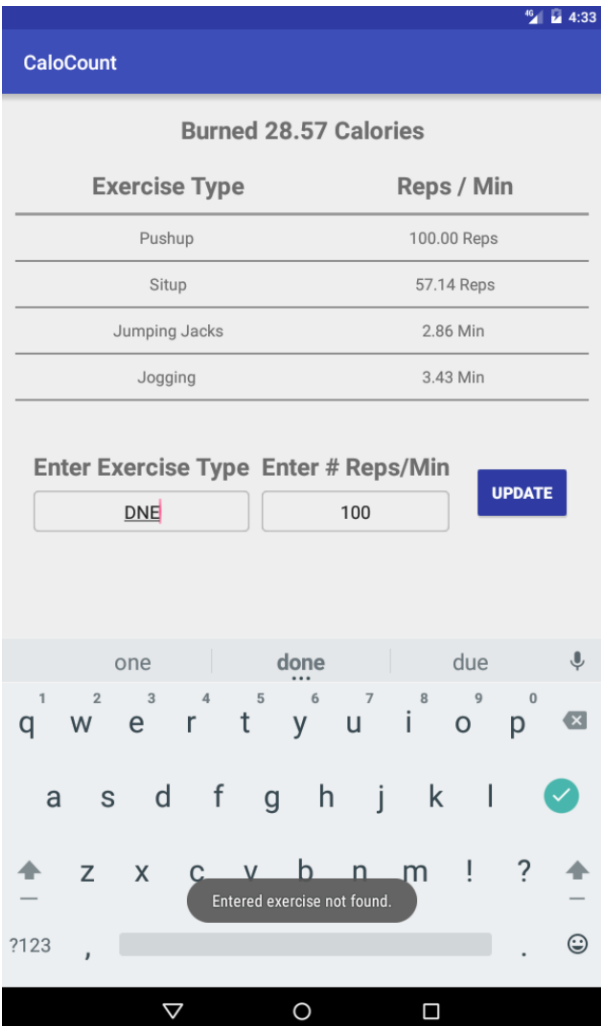

Error-handling
